P.I.E. FRDN-DVD Factory DVD Retention Harness

Overview: The PIE FRDN-DVD is a Ford connector DVD retention harness. The FRDN-DVD will allow you to replace your Ford factory head-unit and retain the audio and power to your OEM DVD player. With the FRDN-DVD, the audio from the Ford OEM DVD player can be connected to the auxiliary input (if equipped) of your aftermarket radio to allow the DVD audio to be heard over the vehicle's audio system. The FRDN-DVD harness consists of a molex-plug on one end which connects to your vehicle's factory plug and stereo RCA audio male connectors on the other end (requires audio cable). There is also a red, 12-volt accessory wire which must be hardwired.
